

- 157 . At an early stage of smallpox, most patients
- become more vulnerable to death
 - seem likely to transmit the disease
 - manifest the disease symptoms
 - tend to move to remote communities
- 158 . All of the following can be the potential causes of the spread of smallpox except
- rapid transmission of the disease at early stages
 - the available stock of variola virus in research centers
 - the possibility of virus surviving in animals
 - release of its virus used for variolation
- 159 . Inoculation of health care staff is performed because
- smallpox is prevalent in some regions
 - eradication has failed in some countries
 - the disease is completely specific to humans
 - the disease can still pose a threat to humans
- 160 . The accidental release of variolation material
- is predicted in near future
 - can cause a major disaster
 - is not a threat anymore
 - is unlikely to cause mortalities
